MidiMatrix currently has seven keyboard macros created for exporting simple melodies and song ideas. They may be activated and deactivated at will. They may be cycled through as many times as necessary to get a song, for example, by pressing any of the various function keys (e.g., f1 to f7) while the macro button is depressed. They also may be customized for speed, velocity, or any other parameters. (e.g., f1: MIDI, Macro #1) The menu options provide access to the seven MidiMatrix MIDI macros. The menu options may be accessed with the various function keys as described above. INSTRUMENTAL/VOCAL MODE Description: MidiMatrix provides instrumental (Monophonic, Polyphonic, etc.) or vocal (Monophonic, Polyphonic, etc.) piano, keyboard and percussion sounds as MIDI instruments. This is achieved by setting the velocity and note assignment to the appropriate parameters for the instruments. If the sound generated by the instrument is of sufficient quality, it may be saved as an instrument with MIDI parameters. If not, the sound may be mapped to the parameters of a preset MIDI instrument and saved as an instrument. This may be accomplished in the preset menu as described above. If the sound is so poor that it is unacceptable to the user, he or she may deactivate the instrument. PATTERN EDITOR Description: MidiMatrix has four 16x16 pitch/pattern matrices: 1)Melodic Pattern - MIDI Pitch 1: Normal mode 2)Melodic Pattern - MIDI Pitch 2: Half-step mode (for use with five mode functions to create five-finger vibrato) 3)Melodic Pattern - MIDI Pitch 3: Tritone mode (for use with five mode functions to create five-finger vibrato) 4)Melodic Pattern - MIDI Pitch 4: Chromatic mode (for use with five mode functions to create five-finger vibrato) These may be played and saved as presets to be recalled later. The preset names ("Melodic Pattern", "Melodic Pattern-Half-step", "Melodic Pattern-Tritone" and "Melodic Pattern-Chromatic") may be selected in the preset menu to recall any of the four matrices. To generate the matrix and save it, press the function key that corresponds to the desired matrix, and then press the matrix button.
