
Qualcomm Hs Usb Modem 9091 Driver Zip

Here's how you download the Qualcomm HS-USB Modem driver zip package to your computer's hard drive, unzip it and install it so that you can connect it to your smartphone. This USB driver is compatible with all Windows and MAC operating systems. The following includes information that may be useful in understanding the present invention(s). It is not an admission that any of the information provided herein is prior art, or material, to the presently described or claimed inventions, or that any publication or document that is specifically or implicitly referenced is prior art.

1. Field of the Invention The present invention relates generally to the field of radar detection. More specifically, embodiments of the present invention pertain to the field of radar detector suppression.

2. Description of the Related Art Radar detectors detect the presence of radar and thus can be used in areas where radar is prohibited. Radar detectors are typically battery operated and are often mounted in a vehicle's interior, where they are visible to the driver and passengers, as well as to pedestrians and others outside the vehicle. Some radar detectors have been designed with a miniaturized version of an aircraft target radar detector (TRDD). A TRDD is able to detect the presence of radar signal, which it then reports to the user. Typical TRDDs are used in Europe and are readily available in the United States under the brand names Honeywell and DigiTrak. Some radar detectors operate according to the two primary detection methods described herein. One method of detecting radar relies on the simple detection of the RF power of the incoming radar signal. A second detection method detects the modulation of the incoming radar signal. In this method, the radar signal is sensed by a delay-and-sum detector (DASD), which is driven by a down-converted replica of the incoming radar signal. The downconverted replica of the radar signal can be generated by combining a local oscillator with a mixer driven by the incoming radar signal. Therefore, the presence of the modulated incoming radar signal in a DASD can be detected. With either method, when a TRDD has received a radar signal, it may display a "detected" notification. However, in a vehicle, it is not desirable to always display a "detected" notification, as this can be distracting to the driver and passengers in the vehicle. Hence, it is desirable to provide a system that suppresses a "detected" notification in a TRDD in which radar
